RULE—Square Method. Multiply the distance in feet between the trees by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill, which, divided into the number of feet in an acre (43,560) will give the number of plants or trees to the acre.

We offer to the trade the following list of stock. All trees are of best quality, fully up to grade, clean and smooth, well-rooted, absolutely free from disease, and strictly true to name. All stock is of our own growing. It will be packed in a manner to give you entire satisfaction, either in bulk car shipments or in paper lined cases and bales. We urgently request trial orders from new customers, as we know you will be pleased with our stock and methods of doing business. We can ship at any date you specify. We cordially invite you to call and inspect the stock and packing. We will be pleased to quote special prices on large acreage.
